Economic sentiment drops in both the EU and the euro area

The *Economic Sentiment Indicator* (ESI) for the EU and the euro area declined in July but remains above its long-term average. It fell, by 2.2 points respectively, to 102.4 in the EU and to 103.2 in the euro area. In the euro area the fall resulted from a decline in confidence in all sectors, with strong losses in industry and services. In the EU confidence also declined notably in industry, retail trade and among consumers, with marginal falls in services and an improvement in the construction sector.

Most Member States recorded a drop in sentiment. Among the seven largest EU Members States, confidence in *Italy* fell the most (-4.5), followed by *Spain* (-2.7). The confidence indicator fell less significantly in the *Netherlands* (-2.1), *Germany* (-1.8), the *UK* (-1.4) and *France* (-0.5), while it improved slightly in *Poland* (+0.4). In July, the ESI remains above its long-term average only in *Germany* and *France*.

Although confidence remains firmly above its long-term average in *industry* in both the EU and the euro area, this sector contributed negatively to overall sentiment in both regions. Industrial confidence decreased by 2.6 points in the EU and by 2.4 points in the euro area, on the back of more cautious managers' *production expectations* and more pessimistic views about their *overall order books*. *Past production* declined markedly in both regions, while the assessment of *stocks* continued to improve from historic lows.

Sentiment in *services* decreased by 2.2 the euro area, but less so in the EU (-0.4). In both regions, managers showed concerns about both their *past business situation* and *past demand developments*, while expected *future demand* declined slightly. The worsening of sentiment in the *retail* sector was more pronounced in the EU (-2.6) than in the euro area (-0.9), as the UK reported losses in this sector. Also, confidence among consumers decreased in both regions (-1.5 in both the EU and the euro area), reflecting mainly increased pessimism about the future *general economic situation* and *unemployment*. Sentiment in construction decreased in the euro area (-1.0), while improving in the EU (+0.9). However, both indicators remain below their long-term average.

In the euro area *employment expectations* deteriorated in industry but improved in services. After the increase observed in the first quarter 2011, managers' *selling-price expectations* in these two sectors continued to decline for the fourth consecutive month. Contrasting with managers' prospects, consumers' *price expectations* increased moderately in the euro area in July.

Confidence in *financial services* – not included in the ESI – decreased by -4.6 in the EU and by -10.8 in the euro area. The deterioration in the euro area reflected a weaker assessment of all the underlying components.

In the *quarterly survey of the manufacturing sector*, carried out in July 2011, industrial managers in the EU and the euro area reported significantly weaker *new orders* and *export volume expectations* for the three months ahead. In both regions, managers' views on their *competitive position on foreign markets outside the EU* also deteriorated over the past three months.

Capacity utilisation declined in July in both the EU and the euro area, interrupting its two-year upward trend since the trough in July 2009. At 80.7% in the EU and 80.9% in the euro area, capacity utilisation slipped just below its long-term average. This aggregate picture masks a strong heterogeneity at the Member State level, with Germany remaining firmly well above its long-term average while peripheral countries are lagging behind.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

TABLE 2b: Quarterly survey of manufacturing industry

(Data collected in January, April, July and October each year.)

Capacity utilisation in manufacturing industry (%)

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(b) Balances: i.e., differences between the percentages of respondents giving positive and negative replies.

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(c) The survey for the Netherlands is temporarily discontinued.
